

PTFE Bellow

PTFE Bellow

PTFE bellows are used as balancing elements between engineering parts, which is widely use in chemical ,food and medical appliances. The different geometres of the folds hight flexible or pressure-resistant versions can be designed and manufactured. External and internal Pressure, number of runs and all -closed/ all-open lengths are the critical factors to consider in designing a bellow.

PTFE's outstanding material properties allow bellows to be used increasingly in mediactal, good and general industrial applications.

Materials

Virgin PTFE, Modified PTFE

Sizes and shapes

Standard or according to customer drawing.
